DESCRIPTORS: *Pistons, Fuel injection, Internal combustion engines, Temperature, Motorcycles, Injection carburetors.

In a two-stroke engine with crankcase scavenging and a carburetted fuel supply, the temperature at the centre of the piston crown reaches 355-360°C.; this limits the possibility of engine development. With a 10% increase in the charge weight, the temperature at the centre of the piston crown could rise to 390°C., i.e., to a level
